

Part I Directions:

Read the paragraph below about Saturn. Then go back and underlined the prepositional phrases. (11)

From Earth, Saturn's rings look like smooth ice. However, according to information gathered by Pioneer 11, Saturn's rings include pieces of frozen rock. Instead of solid stationary objects, Saturn's rings are actually millions of tiny orbiting objects. When Pioneer 11 was above the rings, the radiation readings were high. When it passed through the rings, the radiation readings under the rings were lower than those during takeoff from Earth.

Part II Directions:

After underlining the prepositional phrases found in the passage above, go back to each one and list the prepositions for each one. List them in order. (14)
